shreya-kalgaonkar@shreya-kalgaonkar-Legion-5-16IRX9:~/Desktop/CCA-2_CCD$ kubectl get pods
E1012 20:45:34.689947 8440 memcache.go:265 "Unhandled Error" err="couldn't get current server API group list: Get \"https://192.168.49.2:8443/api?timeout=32s\": dial tcp 192.168.49.2:8443: connect: no route to host"
E1012 20:45:37.754130 8440 memcache.go:265 "Unhandled Error" err="couldn't get current server API group list: Get \"https://192.168.49.2:8443/api?timeout=32s\": dial tcp 192.168.49.2:8443: connect: no route to host"

shreya-kalgaonkar@shreya-kalgaonkar-Legion-5-16IRX9:~/Desktop/CCA-2_CCD$ minikube start
minikube v1.37.0 on Ubuntu 24.04
Using the docker driver based on existing profile
Starting "minikube" primary control-plane node in "minikube" cluster
Pulling base image v0.0.48 ...
Restarting existing docker container for "minikube" ...

Docker is nearly out of disk space, which may cause deployments to fail! (90% of capacity). You can pass '--force' to skip this check.
Suggestion:

Try one or more of the following to free up space on the device:

1. Run "docker system prune" to remove unused Docker data (optionally with "-a")
2. Increase the storage allocated to Docker for Desktop by clicking on:
   Docker icon > Preferences > Resources > Disk Image Size
3. Run "minikube ssh -- docker system prune" if using the Docker container runtime

Deployment sorta worked but the microservices won't talk to one another, there are some network config issues and infrastructure issues which i can't exactly pinpoint but locally the services are fully functional
